

Commercial or Residential project?

The Hills HideAway will fit your requirements.

New model, new sizes

The Hills™ HideAway is a projection screen installation system that allows the seamless and discreet installation of both LP Morgan™ and Grandview™ projection screens. Mounted within the ceiling cavity, the robust backing box allows the structural component of the HideAway to be pre-installed. Plaster and Paintwork can now be applied around the unit. Once complete, the trim and door can be installed for a professional and perfect finish, every time.

The new Hills HideAway is the next stage for HideAway systems and ships with bracketry fitted for both LP Morgan and Grandview screens allowing on site selection of the screen that will be fitted: Face the backing box one way for Grandview screens, face it the other for LP Morgan screens.

Grandview

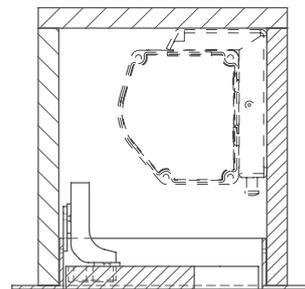

By installing the Back Box using the Grandview orientation, the pre-installed brackets are aligned to install your Grandview screen in the correct orientation and to allow power and cable management alignment. The system will operate as existing Grandview HideAways operate.

LP Morgan

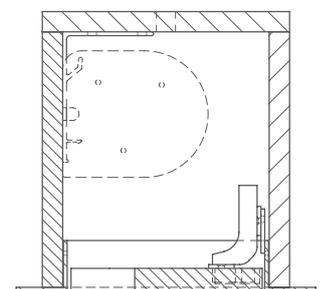

By selecting the LP Morgan orientation during installation, the correct alignment of bracket and cable management penetrations allows installation of your LP Morgan screen. Brackets are, again, supplied and pre-installed and the Hills HideAway operates as existing LP Morgan HideAways operate.

Features of the Hills HideAway include:

- Stapled and glued construction
- Site friendly particle board backing box
- Made from ecologically sustainable timbers
- Control and power exit holes
- 100% Australian made

Fitted with Grandview
